

How to add code to github.com - procedure

1. git init (above the folder with source code)
2. touch readme.txt (create one if needed)
3. git status (check for the status)
4. git add . (Not to forget the dot at the end)
5. git commit -m "Commit MRS" (add a comment)
6. git remote add origin <https://github.com/yourrepo>
(get the link from github.com _ You have a copy paste symbol)
7. git push -u origin master (this command usually does not work.. There needs a sync overall)
8. git fetch origin master
9. git rebase origin/master (sync the local with remote)
10. git push -u origin master (this should work)
